Project Title: Import Data Using Transform Map – Spreadsheet

Date: 28 September 2026

Team ID: SWTID-2026-2519

PHASE 2 – REQUIREMENT ANALYSIS

1. Introduction

Requirement Analysis is the process of identifying the functional and technical requirements needed to develop the spreadsheet data import process in ServiceNow.

The main requirement of this project is to import spreadsheet data into ServiceNow using an Import Set and Transform Map, and correctly transfer the source data into the required target table.

2. Functional Requirements

The system should provide the following functionalities:

• Create a custom Institution Details target table.

• Prepare spreadsheet data containing student and faculty information.

• Create an Import Set Table to temporarily store spreadsheet data.

• Allow users to upload spreadsheet data into ServiceNow.

• Create a Transform Map between the Import Set Table and target table.

• Map source spreadsheet fields to corresponding target fields.

• Transform and import records into the Institution Details table.

• Use Student Roll Number as a matching field to reduce duplicate records.

• Allow imported data to be verified after transformation.

• Allow administrators to manage the import configuration.

3. Non-Functional Requirements

The system should satisfy the following requirements:

• Data Accuracy: Spreadsheet values should be mapped to the correct target fields.

• Reliability: Import and transformation should work consistently.

• Maintainability: Field mappings should be easy to update.

• Scalability: The solution should support additional spreadsheet rows and records.

• Usability: Authorized users should be able to perform the import process easily.

• Performance: Spreadsheet records should be transformed efficiently.

• Data Integrity: Imported information should be stored correctly in the target table.

4. User Requirements

User	Permission
Administrator	Full access to import configuration and records
Import User	Upload spreadsheet and start import
Transform Administrator	Create and configure Transform Map
Data User	View imported records
Unauthorized User	No access to restricted import configuration

5. System Requirements

• Software Requirements

• ServiceNow instance

• Web browser

• Internet connection

• ServiceNow System Administrator access

• Spreadsheet application for preparing the source file

• Hardware Requirements

• Computer/Laptop

• Minimum 4 GB RAM

• Internet connectivity

• Keyboard and mouse

6. Database/Table Requirements

A custom target table named Institution Details will be created. An Import Set Table will be used as the temporary source table for the spreadsheet data.

Target Table Name: u_institution_details

Field	Type
Student Roll Number	Auto Number / Matching Field
Student Name	Reference – User
Faculty Name	Reference – User
Branch	Choice
Email	String
Phone Number	String
Description	Multi String

The Branch field may contain:

• ECE

• EEE

• CSE

The spreadsheet source should contain corresponding columns for the target fields.

7. Import Set and Transform Map Requirements

The project will implement the following import components:

Component	Requirement
Source	Spreadsheet
Import Set	Required
Import Set Table	Required
Transform Map	Required
Target Table	Institution Details
Field Mapping	Required

Matching Field	Student Roll Number

8. Field Mapping Requirement

The following source-to-target mappings are required:

Source Spreadsheet Field	Target Field
Student Roll Number	Student Roll Number
Student Name	Student Name
Faculty Name	Faculty Name
Branch	Branch
Email	Email
Phone Number	Phone Number
Description	Description

9. Security Requirement

The system must ensure that only authorized users can upload spreadsheets, configure Transform Maps, execute transformations, and manage imported records according to their ServiceNow permissions.

For example:

• Authorized Import User → Upload spreadsheet

• Transform Administrator → Configure and run Transform Map

• Data User → View imported records

• Unauthorized User → Access denied

This provides controlled access to the data import and transformation process.

10. Expected Result

After fulfilling the requirements, the system should successfully:

• Accept spreadsheet data.

• Store uploaded rows in the Import Set Table.

• Transform source data using the Transform Map.

• Map spreadsheet columns to the correct target fields.

• Create or update records in the Institution Details table.

• Reduce duplicate records using the matching field.

• Allow verification of imported records.

• Provide administrators with control over the import configuration.

11. Conclusion

The Requirement Analysis phase defines the functional, non-functional, user, system, database, import, and security requirements of the project. These requirements will serve as the foundation for designing and developing the Import Data Using Transform Map – Spreadsheet solution in ServiceNow.
