Project Title: Import Data Using Transform Map – Spreadsheet

Date: 28 September 2026

Team ID: SWTID-2026-2519

PHASE 5 – PROJECT DEVELOPMENT

1. Introduction:

The Project Development phase describes the actual implementation of the spreadsheet data import process in ServiceNow. The project was developed using an Import Set, Import Set Table, Transform Map, field mappings, and a custom target table.

2. ServiceNow Environment Setup:

The ServiceNow instance was opened using a web browser with administrator access. The development environment was prepared to create:

- Import Set Table
- Target Table
- Custom Fields
- Spreadsheet Data
- Transform Map
- Field Mappings

3. Spreadsheet Data Creation:

A sample spreadsheet was prepared to store student and institution details. The spreadsheet contained the following columns:

Field Name	Sample Value
Student Roll Number	STU001
Student Name	Arun Kumar
Faculty Name	Dr. Ravi
Branch	CSE
Email	arun@gmail.com
Phone Number	9876543210
Description	Computer Science Student

The spreadsheet was saved in a supported format and prepared for upload into ServiceNow.

4. Import Set Table Creation:

An Import Set Table was created to temporarily store the spreadsheet data before transformation. The imported columns were configured to match the source spreadsheet.

5. Spreadsheet Upload:

The spreadsheet file was uploaded through the ServiceNow Import Set process. ServiceNow created import records from the spreadsheet rows.

6. Transform Map Creation:

A Transform Map was created to transfer data from the Import Set Table to the target Institution Details table.

Transform Map Detail	Value
Source Table	Import Set Table
Target Table	Institution Details
Active	Yes
Run Business Rules	Yes

7. Field Mapping Configuration:

Source spreadsheet fields were mapped to the corresponding fields in the Institution Details target table.

Source Field	Target Field
Student Roll Number	Student Roll Number
Student Name	Student Name
Faculty Name	Faculty Name

Branch	Branch
Email	Email
Phone Number	Phone Number
Description	Description

8. Transform Configuration:

Component	Configuration
Source	Spreadsheet
Import Set	Enabled
Transform Map	Active
Target Table	Institution Details
Field Mapping	Configured

The

Matching Field	Student Roll Number

Transform Map was configured so that the imported spreadsheet records are converted into records in the target Institution Details table. Field maps were checked before running the transformation.

9. Coalesce / Matching Configuration:

Student Roll Number was used as the matching field for identifying an existing record during transformation. This helps avoid unnecessary duplicate records when the same student data is imported again.

10. Run Transform:

The Transform process was executed after completing the field mappings. ServiceNow processed the Import Set records and created or updated records in the target table.

11. Import Result Verification:

The target Institution Details table was checked after the transformation. The imported values were verified against the original spreadsheet data.

12. Complete Import Structure:

13. Data Import Flow:

The implemented data import flow is:

Spreadsheet → Import Set → Import Set Table → Transform Map → Field Mapping → Institution Details Table

The spreadsheet data is first loaded into the Import Set Table. The Transform Map then maps the source fields to the target fields and creates or updates records in the Institution Details table.

14. Development Result:

The ServiceNow project was successfully configured with:

- Spreadsheet source data
- Import Set Table
- Institution Details target table
- Active Transform Map
- Required field mappings
- Student Roll Number matching configuration
- Imported target records
- Import result verification

15. Conclusion:

The Project Development phase implemented the planned spreadsheet data import process in ServiceNow. The system uses an Import Set and Transform Map to transfer spreadsheet data into the Institution Details target table. The completed implementation is ready for the Project Testing phase.
